

Discovering and analyzing business processes

Prof. Dr. Martin Matzner

Reasons for analyzing business processes

- **Software selection**
 - Understanding of current processes ...
 - ... is basis for evaluating different software tools
- **Compliance**
 - Understanding of current processes and rules ...
 - ... is basis for checks
- **Process design**
 - Understanding of current processes ...
 - ... is basis for identifying improvement potentials

Process analysis

- **Software selection**
 - **Understanding of current processes ...**
 - ... is basis for evaluating different software tools
- **Compliance**
 - **Understanding of current processes and rules ...**
 - ... is basis for checks
- **Process design**
 - **Understanding of current processes ...**
 - ... is basis for identifying improvement potentials

Process analyses start with capturing the current situation

- **Starting point** for process analyses:
 - Process Discovery: What is the as-is process?
 - Process Analysis: What are current problems?

Methods for capturing the current situation

- Discover processes via
 - Interviews
 - Workshops
 - Document analyses
 - Analyses of IT systems
 - Observations

➔ **Time-consuming = expensive**

Potential problems with capturing current situation

- Process models might **outdate**
 - e.g., created years ago, but not maintained
 - Process models might be **imprecise**
 - e.g., special case or exception has not been considered
 - Process models might be **“wrong”**
 - e.g., process work should be perceived as “more demanding / challenging”
- ➔ **potentially flawed = potentially wrong decision**

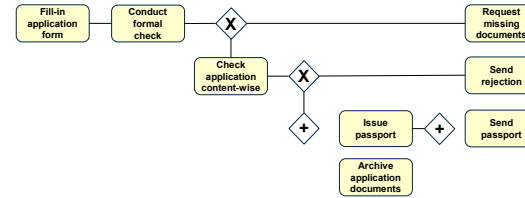

Why *Process Mining*?

Motivation

- **Starting situation:** “Conventional” process analyses
 - What is the as-is process?
 - What are current problems?
- **Problems** w.r.t. costs & quality

Event-Logs

Data transformation

Data transformation

Applicant	Event type	Timestamp
Jane Doe	Application received	2019-06-15 11:45
Richard Roe	Application received	2019-06-15 12:13
Jane Doe	Formal review of application	2019-06-16 16:20
Jane Doe	Application received	2019-06-16 16:27
Richard Roe	Formal review of application	2019-06-17 14:48
Richard Roe	Content check of application	2019-06-17 14:56

Case	Event type
Jane Doe	Application received – Formal review of application – Application rejected
Richard Roe	Application received – Formal review of application – Content check of application

What is *Process Mining*?

- **Software selection**
 - **Understanding of current processes ...**
 - ... is basis for evaluating different software tools
- **Compliance**
 - **Understanding of current processes and rules ...**
 - ... is basis for checks
- **Process design**
 - **Understanding of current processes ...**
 - ... is basis for identifying improvement potentials

Why *Process Mining*?

Motivation

- **Starting situation:** “Conventional” process analyses
 - Process Discovery: What is the as-is process?
 - Process Analysis: What are current problems?
- **Problems** w.r.t. costs & quality
- **Approach:** event-based data analyses
 - *“Let the process speak for itself”*
